The engineering design process is a methodical series of steps that engineers use in creating functional products and processes. The process is highly iterative - parts of the process often need to be repeated many times before another can be entered - though the part(s) that get iterated and the number of such cycles in any given project may vary.

A mental model captures ideas in a problem domain, while a conceptual model represents 'concepts' (entities) and relationships between them. A conceptual model in the field of computer science is a special case of a general conceptual model.

The following steps are included in "On-site": Analysis of the existing control room and information gathering on the current design. Procurement of outline documents and a questionnaire is conducted on the existing control room for a good understanding of the situation and needs.
